

**AMENDMENTS TO THE SPECIFICATION**

**Please replace the second full paragraph on page 1 of the specification with the following amended paragraph:**

Generally, a transmitting terminal of a cdma (code-division multiple access) telecommunication system transmits data through an application layer, a radio link protocol layer, an MUX sub layer, and a physical layer. That is, the application layer is a CODEC-related standard such as H.324M, H.323, and T.120. The physical layer ~~130-140~~ of Fig. 1 is a portion for performing channel coding, PN (pseudo noise) spreading and modulation, and also includes a portion for performing an air interface.
